

# “BY THE YEAR 2050, A TEAM OF FULLY AUTONOMOUS HUMANOID ROBOTS WILL WIN THE SOCCER WORLD CUP AGAINST HUMANS”

## THIS IS THE START!

Scientists predict that with the advances in modern technology they will be able to make robots that can act and move like humans and football will never be the same.

Robosoccer has arrived and although these robots are controlled by the fee paying public, it is due to take the entertainment industry by storm.

“Soccer Circus has been a huge success over the Christmas period and Robosoccer has added another exciting element to the world’s first interactive football experience for the whole family to enjoy.”  
Said Kevin Keegan, former England Footballer and Manager.

Kevin Keegan has endorsed Robosoccer to such an extent that he has got one of the first systems to be made available in the UK, which he has put into his Soccer Circus experience, based near Glasgow.

Andrew Cotterell, the inventor and entrepreneur behind Robosoccer, has invested his endless energy, time and money into developing a fully interactive soccer game.

“I wanted everyone to have a fantastic time using robots to play the world’s most popular game.”

Robosoccer is available to rent or buy, and has already proved to be a great revenue generator for Soccer Circus.

**“BY THE YEAR 2050, A TEAM OF FULLY AUTONOMOUS HUMANOID ROBOTS WILL WIN THE SOCCER WORLD CUP AGAINST HUMANS”**

**THIS IS THE START!**

Essentially the game consists of 4 robots, a football pitch, two goals and of course the ball. It is very simple but very addictive.

Robosoccer can be installed in: Family Entertainment Centres, Theme Parks, Soft Play Centres, Holiday Resorts, Conference Centres & Hotels, Fairgrounds, Shopping Centres, Museums, Race Circuits and Laser Centres. The only limit is your imagination.

Robosoccer is a self-contained system, enabling 4 players to control the robots, requiring a space of 7.5 metres x 5metres. It is designed for constant use, with barriers to protect the crowds. It is available as a static or mobile system, that latter version has a trailer and weather-proof dome and cover, enabling a one-hour setup.

The system does not require a full time operator and has the flexibility to be coin-operated or free play, allowing contestants a 4 minute game. The opportunity lies in the addictive nature of the game, the customers will be playing it again and again.
